The **ASHVINS Group** presents "Creating Mobile Healthcare Applications for iOS, Android and Windows from a Single Code Base" at a forum associated with the 2015 Healthcare Information and Management Systems Society (HIMSS) Conference.

PRESS RELEASE
Mobile Application Development and V&V
The ASHVINS Group, Inc. - Technology Professionals
http://www.ashvinsgroup.com

MIAMI FL. USA – April 15th, 2015.   The **ASHVINS Group**, Inc., an Information Technology firm focused in project based consulting and staff augmentation, presents approaches, options and drawbacks associated with building mobile applications for iOS, Android and Windows from a single codebase. Cross-platform mobile application development requires proven tools to enable the delivery of true native mobile applications that look and feel as end users expect.

Cross- platform application programming is a software development concept that allows developers to write source code once and then it can run across multiple operating systems such as (in this case), iOS, Android and Windows mobile platforms. Cross-platform applications originate from a single codebase, resulting in reduced development and maintenance costs compared to individually developed native applications to support multiple platforms.   The need for the ability to rapidly develop and deploy applications at scale means cross-platform development tools will only become more and more important over the coming years. Using cross-platform development technologies, applications can be developed to support the expanding platforms of interest for the medical device industry in a cost effective and time critical manner.

ABOUT ASHVINS GROUP

The **ASHVINS Group** serves both federal and commercial marketplaces by providing a variety of technology services including: staff augmentation, project management, requirements analysis, specification development, process/systems evaluation, systems design, implementation and integration, application development and verification/validation. Our projects range from technology consultation to Full Life Cycle Application Development. ASHVINS Technology Professionals' support also includes data collection interfaces, data analysis, database development, process automation and computer related systems validation. In addition, the company is skilled in software development, validation and compliance processes for FDA regulated environments.

Areas of ASHVINS' technical expertise include web based systems, Windows and Mac operating environments, mobile platforms and rapid development technologies. The ASHVINS Group is a Certified Woman Owned Small Business and State of FL SBE. Visit our web site at www.ashvinsgroup.com for a summary of typical projects.
